## Modular releases new fleet-management system

Modular Mining Systems has announced the release of its Dispatch Underground 2015 fleet-management system (FMS).

*Modular is promising improvements with the latest version of Dispatch*

This system has been helping underground mine operations achieve their utilisation and productivity goals since 1989, Modular said.

The latest evolution of the underground FMS gives mines a higher degree of visibility into development and production activities taking place below the surface, it explained.

New features and system enhancements include: advanced development process management; comprehensive active task management; expanded workflow automation; updated desktop- and mobile-application user interfaces; increased flexibility, configurability and adaptability; heightened data capture capabilities; Microsoft Windows, SQL Server 2012, and SQL Server Reporting Services support.

Dispatch is designed to maximise production through real-time, total-activity management of all mobile equipment units. Rugged RFID tags and tag readers track the movements of machines through the mine, while GPS technology monitors equipment position above ground.

With the comprehensive level of equipment tracking, mines can realize more accurate time tracking, material tracking and reporting for all development and production processes, according to Modular.
