## Vale selects Modular wireless solution

Modular Mining Systems, the global leader in the delivery of real-time mine management solutions, has announced that its MasterLink Enterprise wireless-network solution will be implemented at Vale's Carajás open-pit iron ore mine.

*Vale will implemenet Modular's MasterLink Enterprise wireless-network solution*

The two parties have worked together since 1993, when Carajas became Modular's first fleet-management system customer in Brazil.

“We’ve continued to expand our partnership with Vale to encompass a total of 14 sites. Earlier this year, we celebrated the signing of Vale’s Pico mine as our 250th customer,” said Davi Freire, general manager, Modular Brazil.

Carajás first installed the MasterLink 2 network in 2004 and later upgraded to MasterLink 11 in 2007, according to Modular. The mine’s usage of bandwidth-intensive applications, its need to support multiple virtual local area networks, and increased coverage requirements, drove the mine to upgrade its wireless platform.
