

Modular Mining installs systems at Boliden’s Kevitsa Mine

Tucson, Arizona – March 3, 2020: Modular Mining, global leader in the delivery of real-time computer-based mine management solutions, installed its DISPATCH®, ProVision®, and MineCare® systems at the Boliden Kevitsa mine in northern Finland.

The DISPATCH Fleet Management System (FMS) and ProVision Machine Guidance System replaced previous technologies at the mine. The DISPATCH FMS will optimize the mine’s haulage cycle, while the ProVision Excavator system assumes responsibility for machine guidance.

In conjunction with regional Komatsu equipment dealer, Suomen Rakennuskone Oy (SR-O), Modular Mining also installed its MineCare system to bring cloud-based, proactive, asset health monitoring and maintenance management capabilities to the Kevitsa operation. SR-O has also partnered with Modular Mining to provide ongoing service to Boliden.

“We’re very proud to be part of an integrated Komatsu solution that combines world-class equipment, strong local dealer support, and our all-makes technology,” said Greg Lanz, VP Business Development, Modular Mining. “It’s also very exciting to work with a passionate company like Boliden in our shared pursuit of sustainable mining.”

Modular Mining’s solutions were selected to optimize haulage, improve loading accuracy, and increase availability, across more than 30 pieces of equipment in Kevitsa’s mixed-manufacturer fleet. The technologies will help the mine overcome challenges with material blending, material identification at the face, misdirected loads, payload production records, and operator training.

Mine representatives cited Modular Mining’s relationship with Komatsu, as well as product flexibility and extensive range of add-on modules, as being key motivators in the choice to implement Modular Mining’s solutions. In addition, because the mine anticipates an eventual transition to autonomous operation, the DISPATCH FMS’ integration in Komatsu’s FrontRunner Autonomous Haulage System (AHS) also influenced the buying decision.

Boliden is a metals company with a focus on sustainable development. The company’s core competence is within the fields of exploration, mining, smelting and metals recycling.

About Modular Mining

Since 1979, Modular Mining has led the industry in the development and evolution of automated mine-wide management and optimization solutions. With more than 270 deployments, and employees working in 10 globally-distributed offices, Modular Mining delivers maximum value in the key areas of fleet management, machine guidance, equipment health, and operator safety. With a focus on sustainable mining powered by open technology solutions, Modular Mining leverages data and innovation to optimize the mining value chain in real time. For more information, visit:
